macb - Mac and iOS build tool

Dependencies

Xcode must be installed. Project has been tested with Xcode 6.

You also must have Cmake installed:

```
brew install cmake
```

Usage

To clone:

```
git clone https://github.com/wkoszek/macb.git
```

There's no build necessary. You may want to add the macb/ directory to your path:

```
set path=($path /where/is/macb/)
```

To use:

```
./macb sample_main.m sample_func.m
```

This will build `sample_main` program from 2 .m files `sample_main.m` and `sample_func.m`.
